

PRACTICAL 1

Aim: Create the simple “hello world” program

Activity_Main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello World!"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintEnd_toEndOf="parent"
        app:layout_constraintStart_toStartOf="parent"
        app:layout_constraintTop_toTopOf="parent" />

</androidx.constraintlayout.widget.ConstraintLayout>
```

MainActivity.java

```
package com.example.myapplication;

import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
```

```
super.onCreate(savedInstanceState);  
setContentView(R.layout.activity_main);  
}  
}
```

Output

PRACTICAL 2

Aim: Android Resources: (Color, Theme, String, Drawable).

Colors.xml

```
<?xml version="1.0" encoding="utf-8"?>

<resources>

    <color name="purple_200">#FFBB86FC</color>

    <color name="purple_500">#FF6200EE</color>

    <color name="purple_700">#FF3700B3</color>

    <color name="teal_200">#FF03DAC5</color>

    <color name="teal_700">#FF018786</color>

    <color name="black">#FF000000</color>

    <color name="white">#FFFFFFFF</color>

</resources>
```

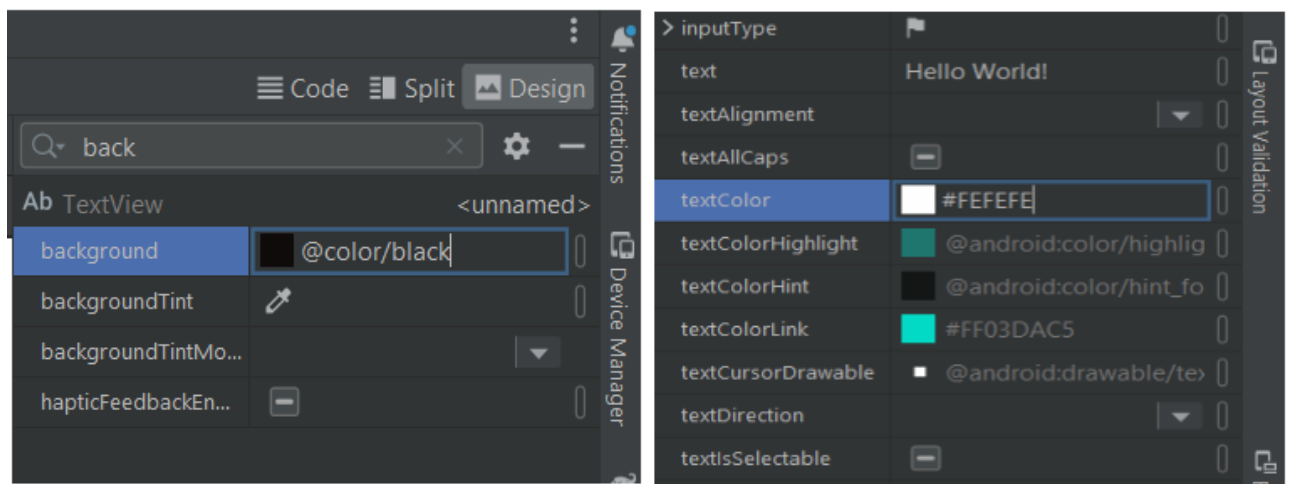

To apply color to Textview :

Using code

```
<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:background="@color/black"
    android:text="Hello World!"
    android:textColor="#FEFEFE"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent" />
```

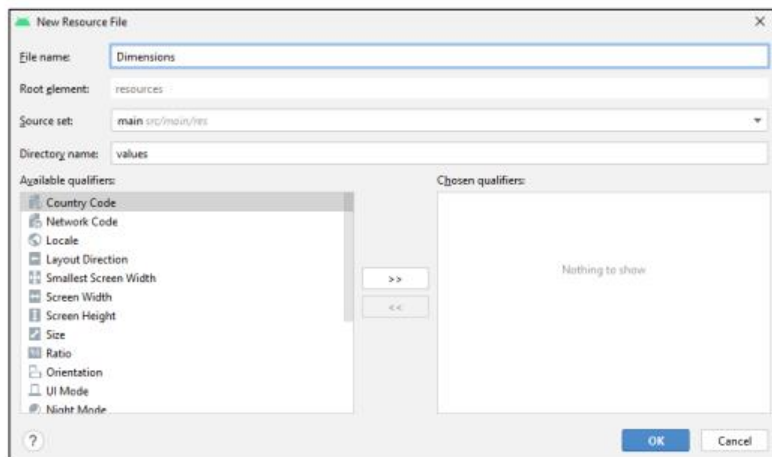

Or using attributes window

Note that we can apply only those colors which are stored in Colors.xml file

Dimensions

Theme:

Style.xml

```
<resources>
```

```
<!-- Base application theme. -->
```

```
<style name="AppTheme" parent="Theme.AppCompat.Light.DarkActionBar">
```

```
<!-- Customize your theme here. -->
```

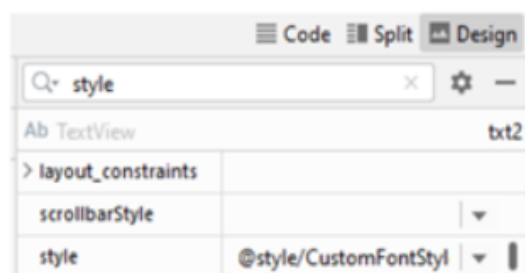

```
<item name="colorPrimary">@color/colorPrimary</item>
```

```
<item name="colorPrimaryDark">@color/colorPrimaryDark</item>
```

```
<item name="colorAccent">@color/colorAccent</item>
```

```
</style>
```

```
</resources>
```

Or add in Code Window

```
<TextView
    android:id="@+id/txt2"
    style="@style/CustomFontStyle"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="@string/college"
    android:textSize="@dimen/font_size"
```

TILAK COLLEGE

String.xml:

```
<resources>

    <string name="app_name">My Application</string>

    <string name="hello">Hello World!!!</string>

    <string name="college">TILAK COLLEGE </string>

    <string name="contact">7058332304</string>

</resources>
```

Using code

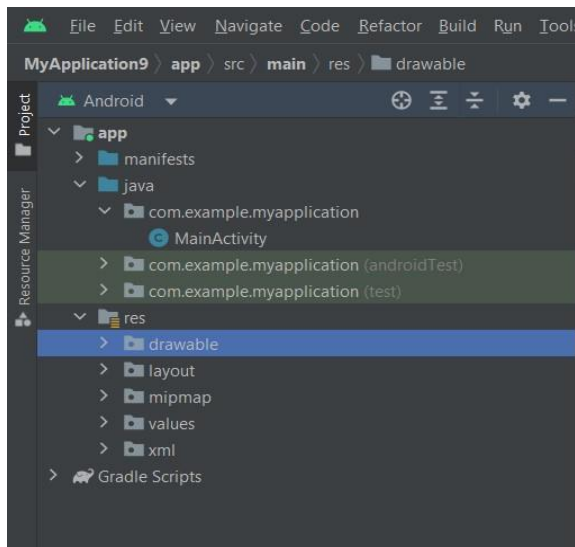

```
<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="@string/college"
    app:layout_constraintBottom_toBottomOf="parent"
    android:textColor="@color/deeppink"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent" />
```

Output

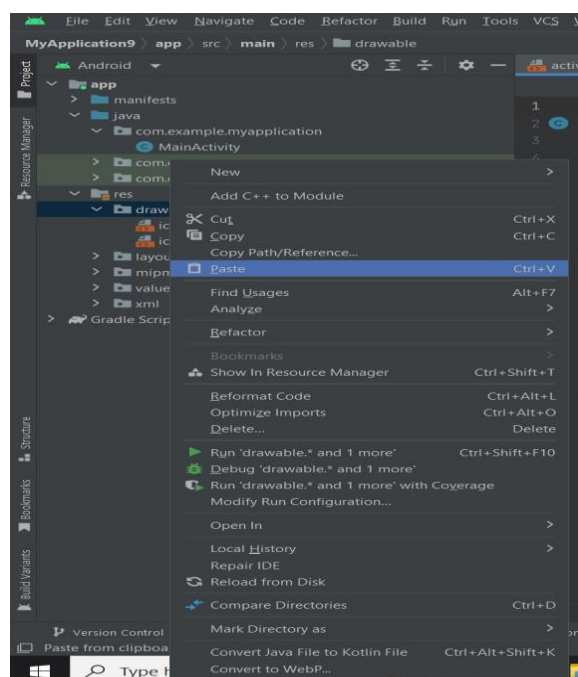

TILAK COLLEGE

Drawable:

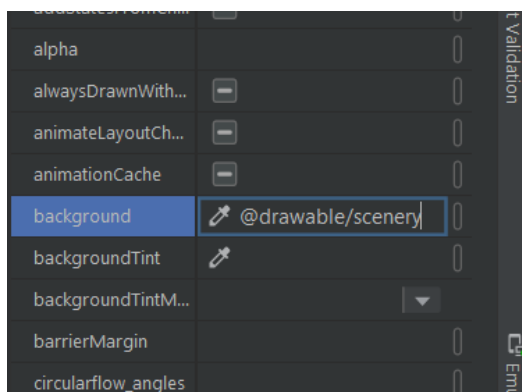

1. Right click on drawable folder

2. Copy the image if you want to create image drawable
3. Paste that image file inside the drawable folder

Now to apply image to background of activity -> select activity -> attributes -> background <name of image>

PRACTICAL 3

Aim: Activity Lifecycle

MainActivity.java

```
package com.example.myapplication;

import androidx.appcompat.app.AppCompatActivity;
import android.util.Log;

import android.os.Bundle;

public class MainActivity extends AppCompatActivity {
    String tag = "LifeCycle";

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        Log.d(tag, "In the onCreate()event");
    }

    public void onStart() {
        super.onStart();
        Log.d(tag, "In the onStart()event");
    }

    public void onRestart() {
        super.onRestart();
        Log.d(tag, "In the onRestart()event");
    }

    public void onResume() {
        super.onResume();
        Log.d(tag, "In the onResume()event");
    }
}
```

```

public void onPause() {
    super.onPause();
    Log.d(tag, "In the onPause()event");
}

```

```

public void onStop() {
    super.onStop();
    Log.d(tag, "In the onStop()event");
}

```

```

public void onDestroy() {
    super.onDestroy();
    Log.d(tag, "In the onDestroy()event");
}
}

```

Output

```

PRACTICAL 4

Aim: Create the login form using different layout

Activity_Main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <TextView
        android:id="@+id/textview"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_alignParentTop="true"
        android:layout_centerHorizontal="true"
        android:text="Login Example"
        android:textSize="35dp" />

    <EditText
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:id="@+id/editText"
        android:hint="Enter Name"
        android:focusable="true"
        android:textColorHighlight="#ff7eff15"
        android:layout_marginTop="46dp"
        android:layout_alignParentLeft="true"
        android:layout_alignParentStart="true"
        android:layout_alignParentRight="true"
        android:layout_alignParentEnd="true" />

    <EditText
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:inputType="textPassword"
        android:ems="10"
```

```

        android:id="@+id/editText2"
        android:layout_below="@+id/editText"
        android:layout_alignParentLeft="true"
        android:layout_alignParentStart="true"
        android:layout_alignRight="@+id/editText"
        android:layout_alignEnd="@+id/editText"
        android:hint="Password" />
<TextView
    android:id="@+id/textView2"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_below="@+id/editText2"
    android:layout_alignParentStart="true"
    android:layout_alignParentLeft="true"
    android:text="Attempts Remaining"
    android:textSize="25dp" />
<TextView
    android:id="@+id/textView3"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_alignTop="@+id/textView2"
    android:layout_alignBottom="@+id/textView2"
    android:layout_alignParentEnd="true"
    android:layout_alignParentRight="true"
    android:layout_toEndOf="@+id/textview"
    android:layout_toRightOf="@+id/textview"
    android:text="Text"
    android:textSize="25dp" />
<Button
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="login"
    android:id="@+id/button"
    android:layout_alignParentBottom="true"
    android:layout_toLeftOf="@+id/textview"
    android:layout_toStartOf="@+id/textview" />
<Button
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"

```

```

        android:text="Cancel"
        android:id="@+id/button2"
        android:layout_alignParentBottom="true"
        android:layout_toRightOf="@+id/textview"
        android:layout_toEndOf="@+id/textview" />

```

```
</RelativeLayout>
```

MainActivity.java

```

package com.example.myapplication;

import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;
import android.graphics.Color;
import android.view.View;
import android.widget.Button;
import android.widget.EditText;
import android.widget.TextView;
import android.widget.Toast;

public class MainActivity extends AppCompatActivity {
    Button b1,b2;
    EditText ed1,ed2;
    TextView tx1;
    int counter = 3;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        b1 = (Button)findViewById(R.id.button);
